JAGAN KUMAR PATRA

Backend Engineer | Node.js · TypeScript · AWS · Microservices

Hyderabad, India | +91 8637249203 | patrajagankumar2002@gmail.com | linkedin.com/in/jagan-kumar-patra | github.com/jagankumarpatra | leetcode.com/u/patrajagankumar

SUMMARY

Backend Engineer with 2+ years building **RESTful APIs and microservices** in **Node.js/TypeScript** on **AWS**. At Runo (CRM SaaS), shipped **40 features and fixes in 5 releases**, including a standalone **AI Call Analysis public API**. Earlier scaled a subscription app to **14K+ users** with **3 payment gateways** at Invincix. Solved **609 LeetCode problems in Java**.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Java, SQL
Backend: Node.js, Express.js, RESTful APIs, Microservices, Event-driven architecture, Webhooks, JWT/Cognito auth, RBAC, Rate limiting, Swagger/OpenAPI
Databases: DynamoDB (access patterns, GSIs), MongoDB (transactions, indexing, migrations), MySQL, Redis
Async & Messaging: AWS SQS, SNS, EventBridge, BullMQ, background jobs, idempotency, caching
AWS & DevOps: Lambda, API Gateway, Cognito, S3, CI/CD (GitHub Actions), Git
Practices: Unit testing, code reviews, production debugging, AI-assisted development (Claude Code, Cursor)

WORK EXPERIENCE

Backend Developer | Runo (CRM SaaS) **Oct 2025 – Present**

- Launched the **Standalone AI Call Analysis public API** across **7 services** (v9.0), letting companies upload recordings and receive AI transcripts, scores and **webhook** results, by adding a new account type across auth, admin and docs.
- Enabled plan-quota dashboards for APIs serving **50K+ calls/month**, by designing a **DynamoDB** metering table (partition keys, **GSIs**) with timezone-aware hourly and daily rollups.
- Delivered **Lead Intelligence** (AI summary, health score, churn prediction) across **7 services** (v8.2), by building filters, report columns, permissions and AI-credit billing.
- Enabled safe admin delegation across **5 services** (v8.1), by replacing one allocation switch with granular **RBAC** for bulk import, export, delete and integrations.
- Prevented timeouts on large lead allocations, by moving history archiving to a **background job** that sends a query instead of the full dataset.
- Fixed call-count mismatches between dashboard, reports and the public API for an enterprise client, by tracing the root cause across services.

Associate Consultant | Invincix Solutions **Jun 2024 – Oct 2025**

- Delivered features and releases for a subscription milk-delivery app serving **14K+ active users**, by building and maintaining **Node.js REST APIs** and the Flutter client.
- Integrated **Razorpay, Cashfree and Easebuzz**, by building webhook handling with signature verification and payment reconciliation flows.
- Cut API response time by **~25%**, by optimizing queries, adding response caching and reducing parsing overhead.
- Enabled verifiable deliveries, by building GPS tracking, driver validation and **EXIF timestamp verification**.

PROJECTS

DigiKhata – Ledger & AI Reminder API | GitHub **Node.js · MongoDB · Redis · BullMQ · Claude API**

- Made ledger writes retry-safe, by combining **idempotency-keyed endpoints** with atomic **MongoDB multi-document transactions**.
- Kept the API non-blocking, by moving **Claude API** Hindi/English reminders and Twilio sends to **BullMQ/Redis** workers behind rate-limited endpoints.

Vaccine Registration API (CoWIN-inspired) | GitHub **Node.js · TypeScript · AWS Lambda · MongoDB**

- Prevented slot overbooking, by using atomic **MongoDB transactions** behind **API Gateway + Lambda**, **Cognito** RBAC, **SQS/SNS** workflows and **EventBridge** schedules.

EDUCATION

B.Tech, Computer Science | Silicon Institute of Technology, Bhubaneswar **Jul 2020 – Jul 2024**

CGPA 9.35 / 10.0 · Data Structures & Algorithms, OOP, DBMS, Operating Systems
